

Audio Song Bench™

Add some *Bells and Whistles™* to your park seating!

Comes to life with music, sound effects, or narration when a guest is seated!

Have acres of fun with themed sound effects!

- Advertise, Educate, or Entertain™ to promote new areas or attractions in your park!
- Our *Kidsensor™* capacitive sensors electronically detect a person through the wooden seat to activate MP3 stereo sounds from our *Sound Byte Player™*. Each seat can have its own fixed or rotating sound tracks and can even “attract” attention with a special timed mode that plays when idle for a length of time.
- A removable SD Flash Memory Card allows easy updating of sound tracks or modes of operation with a personal computer.
- *Audio Song Bench™* is made from “IPE” (pronounced “eee-pay”) an incredibly durable hardwood and has a powder coated steel frame with weatherproof enclosures.

Fun Creative Electronics™

We can help with your other projects too!

The *Sound Byte Player™* and *Kidsensor™* technology can be installed behind non-metallic walls, panels, floors, walkways, and 3D figures; add printed graphics to create simple interactive entertainment!

Educate and Entertain™, ask about educational interactive games using LED graphics for numbers, letters, and words to teach counting, the alphabet, and spelling. Have the kids spell animal names and hear their sounds!

The creative team at RMA Technologies™ has other products and ideas for your display, exhibit, or themed areas. **Call 1-800-291-0235 today!**
