

Flying! with 3 Pilots?

Interactive Flight Display

Demonstrate the operation of an aircraft's flight control surfaces.

Three control panels allow each "pilot" to independently "fly" the aircraft in their own axis - yaw, pitch, and roll. Each panel commands the corresponding flight control surface while the special 3-axis servo stand moves the entire aircraft model.

It's an exciting "rock and roll" interactive experience.

Other buttons allow the landing gear, propeller, and guns to be operated with actual sound effects. A narrative at each panel explains the operation of that wing surface. The aircraft is a professionally finished scale model with a 70" wing span. A variety of different aircraft models can be provided. Add video for an even more interesting display.
